23-insert 5 record in one list

18-what is restful api

is an architectural style for an application program interface (API) that uses HTTP requests to access and use data

14-what is async await and task

The `async` keyword turns a method into an `async` method, which allows you to use the `await` keyword in its body.

15- is diffrence between addscoped,singleton,transient

Singleton is a single instance for the lifetime of the application domain.

Scoped is a single instance for the duration of the scoped request, which means per HTTP request in ASP.NET.

Transient is a single instance per code request.

20-what is bearer

single string which acts as the authentication of the API request, sent in an HTTP "Authorization" header
